

SCIA SIALOGRAPHY CATHETER

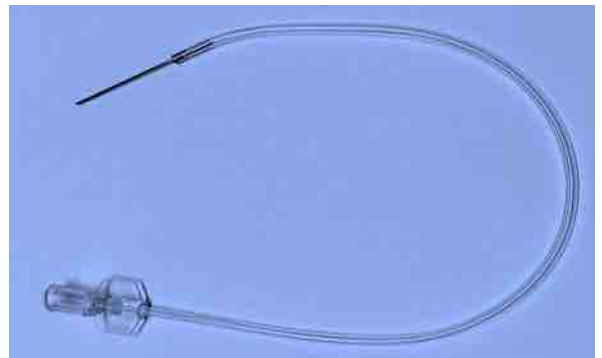

Sialography Catheter

The SCIA Sialography catheter is designed for safe and effective cannulation of the submandibular ducts. The catheter comprises a very fine blunt ended stainless steel needle connected to a highly flexible fine bore (1mm i.d.) tube with a transparent luer lock hub. The flexibility of the tubing ensures that the needle is not accidentally dislodged whilst contrast medium is injected. The catheter is offered with a range of needle gauges and lengths and tubing lengths.

Order Code	Needle Gauge	Tubing Length (cm)
SCIA 2760	27*	60
SCIA 2460	24*	60
SCIA 2420	24*	20
